

Enabled multiple users in multiple locations  
to access corporate data at any time

## Overview

Regus plc is the world's largest provider of workplace solutions, operating over 1,100 business centres across 500 cities in 87 countries. Products and services include fully furnished, equipped and staffed offices, world-class business support services, meeting conference and training facilities and the largest network of public video communication studios, all serving over 200,000 clients daily.

## The problem

Regus' old system was very slow and complex which resulted in a low user uptake. Regus required a more effective, user friendly solution that would encourage user uptake and require minimal disruption.

Hosted Option

## Our solution

Regus chose Blueprint OneWorld as it was a very user-friendly system and offered many customisable options to meet their specific governance and compliance needs. Implementation was organisation-wide with comprehensive training resulting in minimal disruption.

Regus opted for our hosted option meaning that responsibility for Blueprint OneWorld performance, maintenance, backup and upgrades rested with us. Our hosted service meets the highest security standards through our ISAE3402, ISO27001 and ISO9001 certified data centre.

“Cost and the ability to get updates immediately were important to us. We needed to know that the data on the system was secure and could not be lost.”

**Lynsey Blair**, Deputy Company Secretary, Regus plc

## The outcome

Blueprint OneWorld has provided Regus with a secure central location for all their corporate data, subsequently improving data accuracy, and enabling multiple users in multiple locations to access corporate data at any time. Furthermore, Blueprint OneWorld has increased user uptake with the finance, tax and legal teams all using the system effectively.
